

The VTech Cordless Advantage

Today's hotel guests desire an experience that meets—or exceeds—the standards of comfort and convenience that they're accustomed to at home. That means more than thick towels and comfortable sheets. It means ensuring they can be connected and completely mobile from the comfort of their hotel rooms. Whether it's free Wi-Fi or USB charging ports, in-room technology is critical in shaping the perception of your brand. That includes your guest room telephones—VTech's area of expertise.

Design matters

As the primary touchpoint between your guests and your hotel's services, your guest room phones provide a significant opportunity to make a positive impression. Being able to connect with the spa, front desk or room service should be an easy, pleasant experience—not one where a guest is tethered to their bedside or desk by a corded phone.

We have designed our cordless phones to complement today's interiors. Compact footprints and sleek styles lend a fresh, contemporary appeal. For us, design extends beyond the look and feel, however. It's about including features that enhance the user experience, including:

- **Handset speakerphone:** Guests can carry on conversations while typing, rummaging through their suitcases or even reading room service menus.
- **Convenient volume control:** Located on the side of the handset instead of the dial pad, the button lets guests quickly adjust the volume while on a call.
- **Antibacterial plastic:** An inorganic, antibacterial agent in the plastic protects guests from germs and lasts for the phone's lifetime.
- **Easy handset registration:** Hotel staff can register additional handsets in a room just by placing them on the base and waiting a few seconds.

Proven reliability

In the past, reliability was a big issue for hotels wanting to implement cordless phone solutions. VTech has addressed this concern by engineering its cordless phones to deliver dependable performance and the best sound quality. This includes:

- **Radio frequency (RF) enhancements:** Our proprietary RF algorithms minimize interference from Wi-Fi networks, radio signals, walls and other obstacles. In addition, maintenance staff can adjust RF transmission levels to accommodate their property's particular footprint.
- **DECT 6.0 protocols:** DECT 6.0 protocols further enhance the sound quality in our cordless telephones, ensuring interference-free sound quality, security and long range.
- **Battery backup:** Some of our cordless phones come with a backup battery that lets guests stay connected and even make emergency calls during a power outage.
- **Proven experience:** Our more than 35 years of experience manufacturing cordless phones has helped us forge close relationships with industry-leading and well-established chipset and component manufacturers. That's resulted in new, leading-edge platforms and technologies for our phones—advantages passed on directly to our customers.

The green advantage

By incorporating green practices into your guest experience, you can strengthen brand loyalty—and reduce operating costs. VTech cordless phones are ENERGY STAR[®] qualified, which means they use less energy and can help you reduce utility bills. In addition, energy-efficient infrastructure may help your property qualify for LEED certification.

Cost-effective solution

These days, hotels can furnish their guest rooms with a completely cordless telephony solution—at a cost that's significantly less than the common room scenario of one corded and one cordless phone. By installing a VTech cordless phone combination, properties can cut down on PBX license and cable drop costs per room. A fully cordless SIP solution can extend cost savings even further over the corded/cordless SIP model, cutting PBX license costs in half.
