ETX-2i-100G

Business Access and Cell Site Gateway

- 100G Ethernet demarcation device built for mobile 4G/5G xHAUL service delivery
- High density 25GbE and 10GbE ports for flexible mobile RU site connectivity, and network interface operating at 100G, 40G, 10G or 25G rates
- Superior precise timing synchronization, complying with IEEE Class C and supporting SyncE
- Advanced TM with HQoS and dedicated fast lanes for latency sensitive special business and fronthaul traffic
- Ready for CPRI/eCPRI RoE mapping
- Small footprint (1 RU, 19 inch) and low-power consumption solution addressing today's key network challenges

The global proliferation of mobile, video, and cloud applications creates an increasing demand for high-bandwidth access, generating new opportunities for communication service providers.

ETX-2i-100G offers best in class traffic management capabilities, including advanced classification engine, VLAN manipulation, and sophisticated service shaping for full flexibility and control over traffic flows. ETX-2i-100G supports hierarchical QoS, thus enabling delivery of multiple prioritized service types along with best effort services, while efficiently utilizing available network bandwidth. ETX-2i-100G can forward delay sensitive mobile fronthaul (eCPRI) traffic flows, using dedicated "fast-lanes" for guaranteed low latency. (Details on ETX-2i 1G devices and ETX-2i 10G devices can be found in dedicated data sheets.)

ETX-2i-100G provides MEF 10.3 color-aware and unaware policers, delivering high-scale multi-CoS services with hierarchical Quality of Service (HQoS). It supports advanced scheduling, WRED per CoS, shaping per EVC and per port, with flexible classification rules and access lists.

ETX-2i-100G can be configured to forward or discard Layer-2 control frames (including other vendors' L2CP frames).

MARKET SEGMENTS AND APPLICATIONS

Incorporating a complete set of Carrier Ethernet service tools, ETX-2i-100G is ideal for carriers, service providers, municipalities, wholesale providers, and mobile operators seeking to offer unified SLA-based Ethernet business services, such as E-Line (EVL, EVPL), E-LAN (EPLAN, EVPLAN), E-Tree (EP-TREE, EVP-TREE),

Access E-Line, and Transit E-Line services certified with MEF 3.0 and CE 2.0.

ETX-2i-100G enables operators to deliver service level guarantees, by supporting multi-layer diagnostics, fine-grained SLA enforcement, and accurate performance monitoring. Built-in service activation testers verify end-to-end network performance.

INTEROPERABILITY

ETX-2i-100G features and services are standard-based and should work with any 3rd party equipment using standard based features and services.

NETWORK TOPOLOGIES

ETX-2i-100G supports several network topologies such as linear, daisy chain, and self-healing rings (G.8032v2), working with ETX-5 or any third-party standard-compliant Ethernet device.

SERVICES

ETX-2i-100G is capable of delivering up to 100 GbE services using a mix of 10GbE and 100GbE interfaces, while offering CE 2.0/MEF 3.0-certified service models, service monitoring, flexibility, and manageability.

ETX-2i-100G addresses the need to deliver flexible, high-bandwidth Ethernet services for deployment of 4G and 5G cell sites. It can aggregate multiple 4G and 5G RU (eCPRI, O-RAN) service flows over the network interface, creating a cost effective, hybrid fronthaul and backhaul delivery solution.

RESILIENCY

ETX-2i-100G offers fast protection for virtually any kind of failure, in any linear, ring, or dual-homing topology. The device employs IEEE 802.3ad link aggregation, which can be 1:1 LAG and load-balancing LAG, with or without LACP (Link Aggregation Control Protocol), ITU-T G.8032v2 Ethernet ring protection, and ITU-T G.8031 Ethernet linear protection, to ensure continuous availability and sub-50 ms restoration in the event of network outage.

TIMING AND SYNCHRONIZATION

ETX-2i-100G incorporates RAD's advanced synchronization and timing over packet feature set to support mobile heterogeneous network topology. The device combines Synchronous Ethernet (SyncE) with IEEE 1588v2 Precision Time Protocol per ITU-T G.8265.1 and G.8275.1 Telecom profiles for cost-effective synchronization of frequency and phase.

With an integrated GNSS receiver and 1588v2 GM, ETX-2i-100G allows a Distributed Grandmaster timing design solution, offering mobile operators to cost-effectively provide reliable frequency and phase accuracy.

The device also supports 1588v2 slave clock, boundary clock (BC), and transparent clock (TC), as well as dual master operating simultaneously in G.8265.1 and G.8275.1 modes.

The device is ready for Enhanced SyncE (eSyncE) and 1588v2 BC Class C.

MONITORING AND DIAGNOSTICS

Featuring multi-layer OAM and PM tools, ETX-2i-100G performs hardware-based monitoring and diagnostics at high scale and with precision. End-to-end connectivity OAM (IEEE 802.1ag), as well as single-segment OAM (IEEE 802.3-2005), ensure flow-level fault management and performance monitoring over Layer-2 networks to quickly detect connectivity failures for robust protection. Layer-2 and 3 loopbacks offer flexible diagnostic tools.

RFC-5357 TWAMP Light delivers the same functionality over Layer-3 networks, as do one-way TWAMP and two-way ICMP Echo with counters for loss, delay, fragmented packets, reorders, and duplication, in addition to configurable test packet size. Multiple VRFs support the robust TWAMP setup.

ETX-2i-100G offers service activation tools with multiple Y.1564 and L3 SAT testers.

SDN READY MANAGEMENT AND CONTROL

ETX-2i-100G leverages RAD's field-proven, carrier grade operating system, integrated in the entire ETX-2/2i family, to provide a familiar and uniform interface for provisioning, administration, and maintenance operations.

ETX-2i-100G can be managed using RADview, RAD's carrier-class NMS, or any SNMP-based management system. The device supports a variety of access protocols, including CLI over Telnet, SNMPv3, and TFTP, with a comprehensive security suite including SNMPv3, RADIUS, TACACS+, SSH, SFTP, and flexible Access Control Lists.

ETX-2i-100G implements RAD's unique ZT process, allowing devices to onboard automatically and securely without human intervention, reducing operational costs and enabling operators to provision services easily and reliably.

ETX-2i-100G is delivered ready for SDN transformation with comprehensive support for the NETCONF/YANG protocol, enabling operators to utilize modern network service orchestrators on a general level...
